Programming the Roland TB-303

[start](#) | [Sequencer](#) | **Sound:** [signal flow](#) - [vco](#) - [accent](#) |

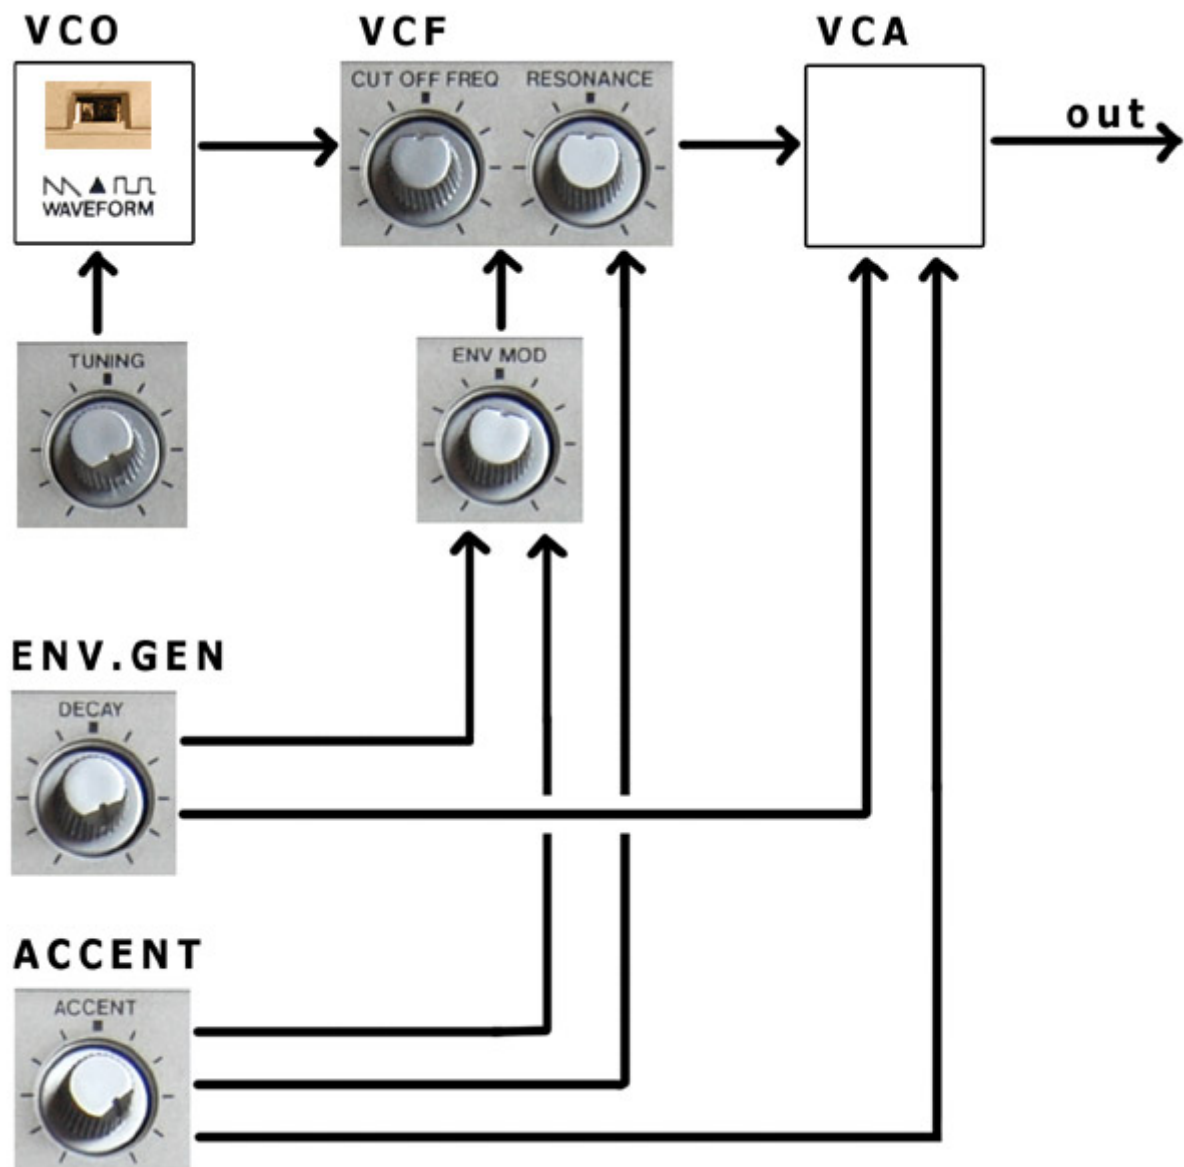

signal flow

Here's the schematic of the TB-303 signal flow. The sound travels from left to right, the modulation from bottom to top.

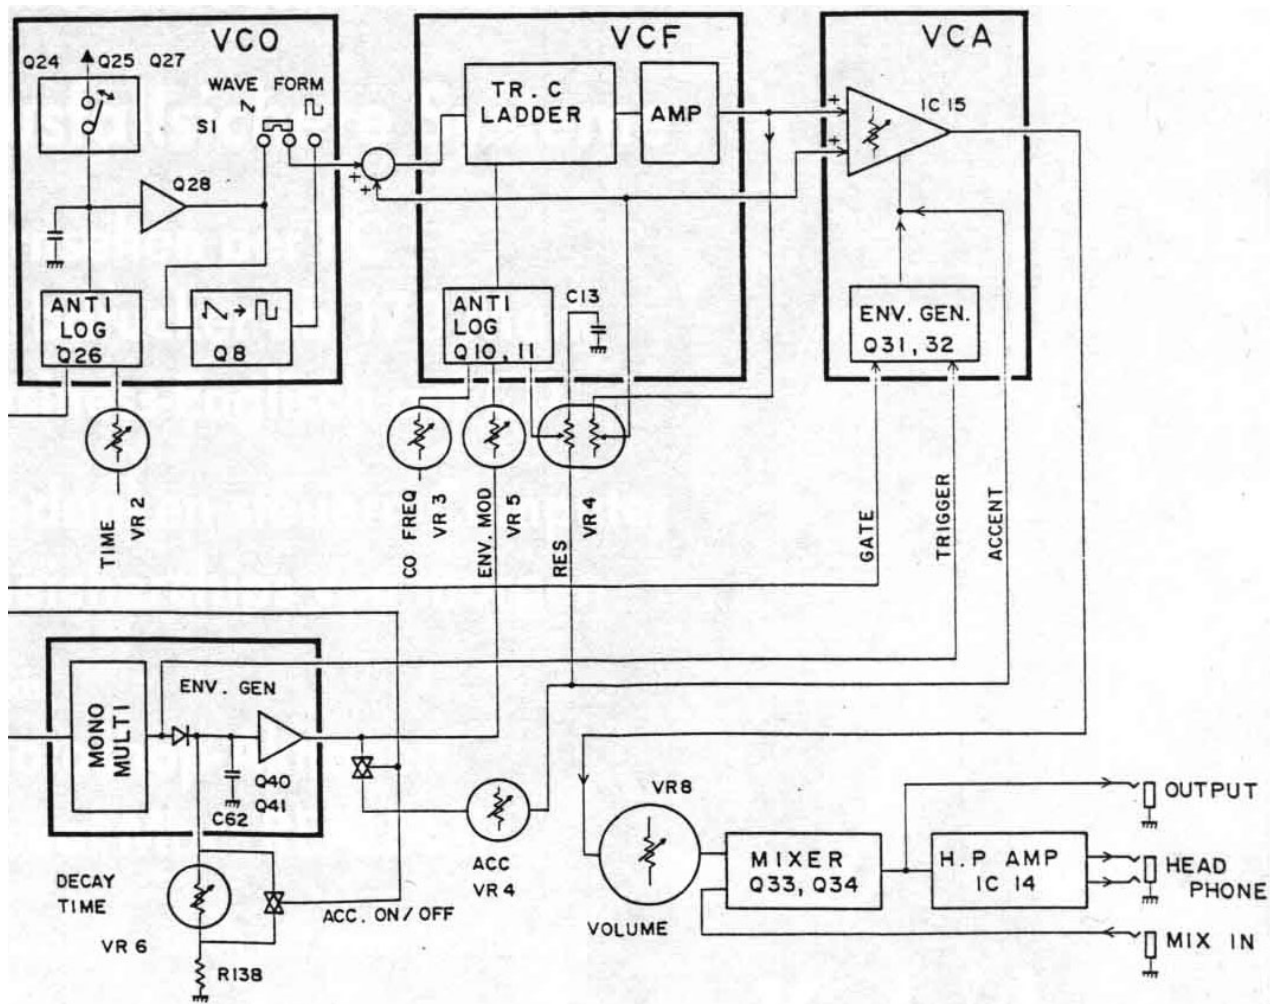

The buttons are rearranged in such a way, that the layout matches the concepts of the signal flow on the face of the ARP2600.

Which makes it much more comprehensible.

- side note: the decay button has no effect on accented notes.

compare the flow in the [service manual on page 4](#)
